

LOCKDOWN SECURITY SYSTEM

ControlledCare's Lockdown Security System is a security solution that is designed to minimize the time it takes to contact law enforcement and to secure a facility during an emergency situation.

If you need a lockdown system for your property, ControlledCare offers an affordable and easy to install lockdown security system. A fully customizable system using several different activation solutions such as wall mounted emergency Push Buttons, PC Desktop Software, Telephone System or a combination of thereof.

The system can be deployed over a wired network or wirelessly.

A TYPICAL LOCKDOWN EMERGENCY ROUTINE

-  Alarm is activated via a push of a button.
-  Automatic trigger of pre-recorded lock down message over the PA system and/or enable alarm horns.
-  Emergency personnel such as police, fire fighters or other designated people are contacted immediately with critical information and location.
-  Custom messages are displayed on TVs, Monitors or other connected panels.
-  Based on predefined zones and rules, doors automatically lock or unlock.
-  Phones display the lockdown message and play an audible lockdown message.
-  Lights flash specific colours indicating to emergency personnel the location of the alarm.
-  Once emergency personnel clear the area, alarms are cancelled, PA system announces of "All Clear".

A lockdown is an emergency protocol that usually prevents people or information from leaving an area. The protocol can usually only be initiated using wired or wireless secured push buttons, covered by special case, cell phone, desktop, etc. and locks down a facility, broadcasting alert message over all facility on PA, controlling doors, gateways etc. based on pre-configured sequence of operation.

Lockdowns can also be used to protect people inside a facility or, for example, a computing system, from a threat or other external event. Of buildings, a partial lockdown usually means that doors leading outside are locked such that no person may enter or exit.

A full lockdown usually means that people must stay where they are and may not enter or exit a building or rooms within said building. If people are in a hallway, they should go to the nearest safe, enclosed room.

SCHOOLS

Lockdown procedures vary by school district. Generally, a lockdown means that interior and exterior doors are locked, and all students and staff must remain in their location from the time the lockdown is announced. Windows are covered, and students are to stay away from windows.

Since the early 2000s, lockdown procedures in schools have been constantly changing. Some schools direct teachers to continue with standard procedures while remaining quiet, while some recommend an active approach against threats.

PRISONS

In its most common usage in corrections units, the term lockdown can be defined as a course of action to control the movement of inmates. Confining all prisoners, except workers, to their cells until the end of the day is an example of a "lockdown period" in a corrections schedule. However a "full lockdown" is used when all prisoners are locked in their cells to prevent prison riots or unrest from spreading or during an emergency.

HOSPITALS

In US guidelines, occasions for preventing entry into a hospital may include: power failure, earthquake, flooding, fire, bomb threat, hostage crisis and active shooter. Occasions for preventing both entry and exit from a hospital may include: external contamination, civil disturbance and abduction of an infant or child.

TYPICAL SCENARIOS

Patient-Staff Alert: To alert staff, a resident presses their call cord button which triggers a transmission to the ControlledCare Even Management Service. When the staff arrive in the room to assist they will press the Cancel button to clear the call.

Staff Assist Alert: The button is used by staff if they are in the room and need additional help. Pressing the button will send a Staff Assist notification to other staff with the proper room location. Or Check-in, Cleaning Required, General Info etc.

AVAILABLE ACTIONS:

- Automatically lock doors based on geographically pre-set zones
- Disable card access for re-entry
- Enabled lighting changes or emergency strobe lights
- Emergency notifications via email call and/or text messages
- Automated pre-recorded announcements/instructions over paging system
- Alarm system and emergency system triggering
- Customizable escalation rules
- Strobes Light Up Inside and Outside
- Card Readers Light up in Red
- Visitor Intercoms are Disabled
- Public Display Monitors Change
- Phone System calls to predefined numbers, groups, cell phones
